The Examiner has rejected claims 1-32 under 35 U.S.C. § 102(e) as being anticipated by Lee et al. (US 2002/0169788).

The applicant has repeatedly traversed that rejection by noting that the claims recite “creating a record in a first buffer associated with the first relational table; and copying the record from the first buffer to the first relational table.” This claim clearly requires two things, first, *creating a record in a buffer* and secondly *copying the record from the buffer to a relational table*. The buffer is *associated* with a relational table, but *is not* the relational table itself.

The examiner has not made out a *prima facie* case of anticipation by showing how each elements is found in the cited reference. MPEP § 2131.

In response to the applicants argument regarding the shortcomings of the reference the examiner repeatedly has indicated that:

Applicant argues Lee makes no mention of nodes or rows or columns of a table and reveals no mention of record creation or buffers or copying from buffers to tables.

Final Action p. 6. As an initial matter, the applicants do not argue that “Lee makes no mention of nodes or rows or columns of a table.” Moreover, The applicants repeatedly pointed out that they do not disagree that Lee teach loading XML data into the tables of a relational database. Nevertheless, that doesn’t address the Applicants point, namely, the paragraphs of Lee cited by the examiner say NOTHING regarding creating a record in a buffer and copying records from a buffer to a table.

Accordingly the applicants submit that the Examiner has not met her burden of providing a reference that teaches every element of the claimed invention.
